

16 January 2020

This letter serves to confirm that Livia Marques Faustino completed part of her PhD studies at the Centre for Minerals Research, University of Cape Town between 01/09/2019 and 30/11/2019. During her time at UCT Livia completed adsorption, microflotation, immersion and isothermal titration calorimetry tests that were designed to investigate the differences in surface properties and flotation response between different types of hematite and different types of apatite. Livia worked extremely hard and was a pleasure to have in our laboratories. She completed a large amount of work during her time here despite some setbacks with the functioning of the equipment. I can confirm that she concluded her test work according to her PhD plan.

Should you require any further information, please do not hesitate to contact me.

Sincerely,

Belinda McFadzean
Associate Professor
